

FLUORIDE DETECTION KIT

Advantages

Colour formation is instantaneous. Visual Fluoride Detection kit helps in locating ground water with fluoride content in the limits (1.0- 1.5 ppm) allowed for drinking. It also helps in finding the saturation point of fluoride remediation unit.

Details of colour formation Fluoride Detection kit consists of a reagent 1 mL of which on addition to 4 mL ground water yields three distinct colours for deficient, safe and toxic levels. Colours that appear are shown above.

Any individual can perform the test irrespective of the educational Background. The reagent is stable for at least six months.

Caution :The reagent is harmless, however oral ingestion and skin contact should be avoided

Product is made and available with BARC Licensees
